

NOUMAN SIDDIQ

Data Analyst | Business Intelligence | Business Analysis

Hyderabad, India • +91 9182546004 • itisnoumansiddiq@gmail.com

linkedin.com/in/noumansiddiq • github.com/noumansiddiq • noumansiddiq.github.io

PROFESSIONAL SUMMARY

Computer Science Engineering graduate and Google Data Analytics certified analyst with hands-on experience across the full analytics workflow — sourcing and integrating disparate datasets, building documented cleaning pipelines in Python, running exploratory and statistical analysis, and translating results into recommendations for non-technical stakeholders. Separately, three years of business operations experience — not analytics roles, but direct exposure to how commercial stakeholders consume reporting and what makes it genuinely useful rather than merely accurate. Seeking a Data Analyst, BI Analyst, or Business Analyst role in Hyderabad, Bangalore, or fully remote.

TECHNICAL SKILLS

Databases & Querying: SQL, MySQL, PostgreSQL; joins (inner, left, right, full), aggregations, GROUP BY and HAVING, subqueries, correlated subqueries, window functions (ROW_NUMBER, RANK, DENSE_RANK, LAG, LEAD, NTILE), common table expressions (CTEs), query optimisation, indexing

Programming: Python — pandas, NumPy, Matplotlib, statsmodels, scikit-learn; Jupyter Notebook; Git and GitHub

Business Intelligence & Reporting: Power BI, DAX, Tableau, Looker Studio; Microsoft Excel (pivot tables, VLOOKUP, INDEX MATCH, XLOOKUP, SUMIFS, COUNTIFS, conditional formatting, data validation, Power Query); dashboard design, KPI definition, stakeholder reporting

Data Preparation & Quality: Data cleaning, wrangling, missing-value imputation, deduplication, data type correction, outlier detection (IQR and z-score), data validation, data quality auditing, feature engineering, ETL concepts

Analytics & Statistics: Exploratory data analysis, descriptive statistics, correlation analysis, trend analysis, cohort analysis, segmentation, time-series forecasting (ARIMA, Prophet, LSTM), hypothesis testing, A/B testing fundamentals

Business & Process: Requirement gathering, stakeholder management, data storytelling, executive presentation, process documentation, SLA adherence, vendor and cost management, cross-functional collaboration

Automation: n8n, Zapier, Make, Airtable, REST APIs (Claude API, WhatsApp Business Cloud API, Meta Graph API)

ANALYTICS PROJECTS

Data-Driven Insights into Global Tourism and Air Transport Safety

Jul 2025 – Apr 2026

Final-Year Major Project, 4-member team • Python, pandas, NumPy, Matplotlib, statsmodels, scikit-learn, Prophet, TensorFlow/Keras, Jupyter

- Integrated six real-world datasets — international tourist arrivals and departures, air passengers carried, aviation fatalities per million passengers, fatal airliner accidents per million flights, and regional tourism distribution — into a single analysis-ready dataset.
- Built a reproducible preprocessing pipeline in pandas: country and entity standardisation across inconsistent sources, forward and backward fill imputation, duplicate record aggregation, and IQR-based outlier capping, documenting the rationale for every treatment rather than dropping records silently.
- Engineered analytical features including year-over-year growth rates, indexed trend series normalised to a base year, volatility measures, and lag-based sequences for supervised time-series learning.
- Produced exploratory analysis outputs — multi-year trend graphs, top-destination rankings, growth rate charts, and a correlation heatmap across arrivals, departures, and passenger volumes — identifying the relationship between tourism demand and aviation activity.
- Trained and comparatively evaluated three forecasting approaches (ARIMA, Prophet, LSTM) on historical arrivals data and recommended the most interpretable model for the business use case rather than simply the lowest-error one.
- Presented findings and model comparisons to an academic review panel, translating statistical output into plain-language conclusions for non-specialist reviewers.

Bellabeat Wellness Case Study

2026

Google Data Analytics Professional Certificate — Capstone • SQL, Microsoft Excel, data visualisation, stakeholder presentation

- Applied the six-phase analysis framework (Ask, Prepare, Process, Analyze, Share, Act) to structure the engagement from business question through to recommendation.
- Cleaned and validated the source fitness-tracker dataset in Excel and SQL, resolving formatting inconsistencies and verifying data integrity before analysis.
- Identified behavioural usage patterns, produced supporting visualisations, and delivered a stakeholder presentation with data-backed marketing recommendations for the product team.

BUSINESS & OPERATIONS EXPERIENCE

Operations and delivery roles rather than analytics roles — included for commercial context, stakeholder reporting, and process ownership.

Business Operations & E-Commerce Lead — Sanjay Numberplates, Hyderabad

Jan 2023 – Present

Family-owned manufacturer (est. 1968) of number plates, name boards, and signage, operating wholesale, retail, and e-commerce channels.

- Coordinate the end-to-end order lifecycle — intake, production scheduling with a three-person shop floor, quality check, and dispatch — tracking every order against committed delivery dates in structured spreadsheets.
- Led the launch of the company's e-commerce arm as a fixed-deadline project: mapped dependencies across GST, Udyam/MSME, and banking registrations, coordinated an external consultant, resolved a documentation blocker that had stalled approval, and closed every statutory milestone within the planned window.
- Own vendor and raw-material procurement, cost sheets, and pricing across seven product lines; maintain SKU, cost, and margin records that drive weekly production and purchasing decisions.
- Track and analyse order volumes, enquiry sources, and channel performance to inform pricing and marketing decisions, reporting trends to business stakeholders as practical recommendations rather than raw numbers.
- Manage customer communication and the brand's digital presence across WhatsApp, Instagram, and e-commerce platforms, sustaining approximately 58,000 monthly content views and converting inbound enquiries into scheduled orders.

Customer Support Associate — Foundever (Verizon process) Oct 2025 – Jan 2026

- Resolved customer queries in a high-volume, SLA-driven enterprise support environment, consistently meeting quality assurance and resolution-time targets.
- Operated within the strict compliance and documentation standards characteristic of large regulated organisations, judging independently when to resolve versus escalate and logging every case accurately.

Technical & Operations Lead — House of Peak Oct 2024 – 2025

- Owned end-to-end delivery of lead-generation and digital marketing campaigns for multiple client accounts — requirements gathering, planning, launch, reporting, and review.
- Produced recurring performance reports, turning campaign data into clear recommendations for non-technical clients and explaining what the numbers meant for their next decision.
- Ran daily operations across functions to keep concurrent client deliverables on schedule, flagging risks early and re-prioritising when scope or timelines shifted.

General Manager (Part-time) — Elaichi Cafe, Secunderabad Jun 2023 – Aug 2023

LEADERSHIP & COMMUNITY

Logistics Head, Quality Education Team — Street Cause Hyderabad · Hyderabad Youth Assembly S13 2024

- Ranked among the top 10 fundraisers in the chapter, raising approximately ₹25,000, and managed fund allocation and procurement for the education team.
- Delivered Season 13's first completed project — scoped, budgeted, and installed a water purifier at Zia-UI-Islam School within a ₹15,000–18,000 budget, coordinating school administration, vendors, and volunteers to finish ahead of every other team.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Google Data Analytics Professional Certificate — Coursera (eight-course program covering the analysis lifecycle, data cleaning, SQL, R, and Tableau, completed with a capstone case study)
- Deloitte Data Analytics Job Simulation — Forage (virtual experience program: data analysis and forensic technology tasks against a client brief)
- Google Cloud — Build Real-World AI Applications with Gemini and Imagen
- Google Cloud — Prompt Design in Vertex AI
- 5-Day Python Program — CodingWise, 2026

EDUCATION

B.Tech, Computer Science Engineering — Swami Vivekananda Institute of Technology (JNTUH), Hyderabad 2022 – 2026
CGPA: 7.15 / 10 | Relevant coursework: Database Management Systems, Data Structures and Algorithms, Python Programming, Statistics and Probability, Machine Learning, Data Mining.

Intermediate (MPC) — St. Mary's Junior College, Himayat Nagar, 2022 | CBSE Class X — St. Andrew's High School, Bowenpally, 2020

ADDITIONAL INFORMATION

Languages: English, Hindi, Urdu

Location: Hyderabad, Telangana — open to Hyderabad, Bangalore, and fully remote roles

Availability: Immediate
